

Douglas M. Bates

lme4: Mixed-effects modeling with R

February 12, 2010

Springer

Contents

1	A Simple, Linear, Mixed-effects Model	1
1.1	Mixed-effects Models	1
1.2	The <code>Dyestuff</code> and <code>Dyestuff2</code> Data	3
1.2.1	The <code>Dyestuff</code> Data	3
1.2.2	The <code>Dyestuff2</code> Data	5
1.3	Fitting Linear Mixed Models	6
1.3.1	A Model For the <code>Dyestuff</code> Data	7
1.3.2	A Model For the <code>Dyestuff2</code> Data	10
1.3.3	Further Assessment of the Fitted Models	11
1.4	The Linear Mixed-effects Probability Model	12
1.4.1	Definitions and Results	12
1.4.2	Matrices and Vectors in the Fitted Model Object	14
1.5	Assessing the Variability of the Parameter Estimates	15
1.5.1	Confidence Intervals on the Parameters	16
1.5.2	Interpreting the Profile Zeta Plot	18
1.5.3	Profile Pairs Plots	19
1.6	Assessing the Random Effects	22
1.7	Chapter Summary	25
	Exercises	25
2	Models With Multiple Random-effects Terms	27
2.1	A Model With Crossed Random Effects	27
2.1.1	The <code>Penicillin</code> Data	28
2.1.2	A Model For the <code>Penicillin</code> Data	30
2.2	A Model With Nested Random Effects	35
2.2.1	The <code>Pastes</code> Data	35
2.2.2	Fitting a Model With Nested Random Effects	39
2.2.3	Parameter Estimates for Model <code>fm3</code>	40
2.2.4	Testing $H_0 : \sigma_2 = 0$ Versus $H_a : \sigma_2 > 0$	41
2.2.5	Assessing the Reduced Model, <code>fm3a</code>	44
2.3	A Model With Partially Crossed Random Effects	44

2.3.1	The <code>InstEval</code> Data	46
2.3.2	Structure of L for model <code>fm4</code>	49
2.4	Chapter Summary	49
	Exercises	51
3	Models Incorporating Covariates	53
3.1	Rat Brain example	55
3.1.1	Structure of the formula used in <code>lmer</code>	55
4	Models for Longitudinal Data	57
4.1	The <code>sleepstudy</code> Data	57
4.1.1	Characteristics of the <code>sleepstudy</code> Data Plot.....	59
4.2	Mixed-effects Models For the <code>sleepstudy</code> Data	60
4.2.1	A Model With Correlated Random Effects	60
4.2.2	A Model With Uncorrelated Random Effects.....	63
4.2.3	Generating Z and A From Random-effects Terms.....	65
4.2.4	Comparing Models <code>fm9</code> and <code>fm8</code>	67
4.3	Assessing the Precision of the Parameter Estimates	67
4.4	Examining the Random Effects and Predictions	70
4.5	Chapter Summary	74
	Problems	74
5	Computational Methods for Mixed Models	77
5.1	Definitions and Basic Results	77
5.2	The Conditional Distribution ($\mathcal{U} \mathcal{Y} = \mathbf{y}$)	79
5.3	Integrating $h(\mathbf{u})$ in the Linear Mixed Model.....	80
5.4	Determining the PLS Solutions, $\tilde{\mathbf{u}}$ and $\hat{\beta}_{\theta}$	82
5.4.1	The Fill-reducing Permutation, P	83
5.4.2	The Value of the Deviance and Profiled Deviance.....	84
5.4.3	Determining r_{θ}^2 and $\hat{\beta}_{\theta}$	86
5.5	The REML Criterion	87
5.6	Step-by-step Evaluation of the Profiled Deviance	89
5.7	Generalizing to Other Forms of Mixed Models	91
5.7.1	Descriptions of the Model Forms	92
5.7.2	Determining the Conditional Mode, $\tilde{\mathbf{u}}$	93
5.8	Chapter Summary	94
	Exercises	95
	References	97

List of Figures

1.1	Yield of dyestuff from 6 batches of an intermediate	5
1.2	Simulated data similar in structure to the <code>Dyestuff</code> data	6
1.3	Image of the Λ for model <code>fm1ML</code>	15
1.4	Image of the random-effects model matrix, \mathbf{Z}^T , for <code>fm1</code>	15
1.5	Profile zeta plots of the parameters in model <code>fm1ML</code>	17
1.6	Absolute value profile zeta plots of the parameters in model <code>fm1ML</code>	17
1.7	Profile zeta plots comparing $\log(\sigma)$, σ and σ^2 in model <code>fm1ML</code> .	18
1.8	Profile zeta plots comparing $\log(\sigma_1)$, σ_1 and σ_1^2 in model <code>fm1ML</code>	19
1.9	Profile pairs plot for the parameters in model <code>fm1</code>	20
1.10	95% prediction intervals on the random effects in <code>fm1ML</code> , shown as a dotplot.	24
1.11	95% prediction intervals on the random effects in <code>fm1ML</code> versus quantiles of the standard normal distribution.	24
1.12	Travel time for an ultrasonic wave test on 6 rails	26
2.1	Diameter of growth inhibition zone for 6 samples of penicillin .	29
2.2	Random effects prediction intervals for model <code>fm2</code>	31
2.3	Image of the random-effects model matrix for <code>fm2</code>	31
2.4	Images of Λ , $\mathbf{Z}^T\mathbf{Z}$ and \mathbf{L} for model <code>fm2</code>	32
2.5	Profile zeta plot of the parameters in model <code>fm2</code>	33
2.6	Profile pairs plot of the parameters in model <code>fm2</code>	34
2.7	Cross-tabulation image of the <code>batch</code> and <code>sample</code> factors	36
2.8	Strength of paste preparations by batch and sample	37
2.9	Images of Λ , $\mathbf{Z}^T\mathbf{Z}$ and \mathbf{L} for model <code>fm3</code>	40
2.10	Random effects prediction intervals for model <code>fm3</code>	41
2.11	Profile zeta plots for the parameters in model <code>fm3</code>	42
2.12	Profile zeta plots for the parameters in model <code>fm3a</code>	44
2.13	Profile pairs plot of the parameters in model <code>fm3a</code>	45
2.14	Random effects prediction intervals for model <code>fm4</code>	47
2.15	Image of the sparse Cholesky factor, \mathbf{L} , from model <code>fm4</code>	48

3.1	Profile plot of the parameters in model fm4	54
3.2	Profile pairs plot of the parameters in model fm4	54
3.3	Activation of brain regions in rats	55
4.1	Lattice plot of the sleepstudy data.....	58
4.2	Images of Λ , Σ and \mathbf{L} for model fm8	62
4.3	Images of Λ , Σ and \mathbf{L} for model fm9	65
4.4	Images of \mathbf{Z}^T for models fm8 and fm9	65
4.5	Profile zeta plots for the parameters in model fm9	68
4.6	Profile pairs plot for the parameters in model fm9	69
4.7	Plot of the conditional modes of the random effects for model fm9 (left panel) and the corresponding subject-specific coefficients (right panel)	71
4.8	Comparison of within-subject estimates and conditional modes for fm9	72
4.9	Comparison of predictions from separate fits and fm9	73
4.10	Prediction intervals on the random effects for model fm9	75
